SUMMARY

Software Engineer with 4.5+ years at Ayvens (formerly ALD Automotive), a Société Générale company, building and maintaining enterprise vehicle-leasing and quoting applications on the .NET and Angular stack. Owns features end-to-end and drives platform-wide initiatives across market/partner onboarding, legacy migration, CI/CD modernization, security remediation, and domain-driven architecture. Trusted with production release coordination and security-critical work in a regulated financial environment.

WORK EXPERIENCE

Société Générale Software Engineer

Bengaluru, IN
Sept 2021 – Present

- Delivered full-stack features across the New Quoter and IKP applications (C#/.NET, Angular), including insurance and vehicle-type-based add-on modules, territory input, SSN uniqueness validation, and an in-app commenting feature used by vehicle dealerships.
- Led migration of partners from the legacy Quotys platform to the New Quoter application, then decommissioned legacy partners, retiring the legacy system and reducing maintenance overhead.
- Launched the application in a new country and onboarded new partners by scripting SQL and JSON changes per BRD.
- Contributed to the CI/CD migration from Octopus Deploy to Azure DevOps by authoring pipeline, environment, and deployment scripts, and coordinated production releases with the release management team.
- Re-architected the IKP application using Domain-Driven Design, improving maintainability and scalability; cleared many SonarQube issues to raise code health.
- Hardened the platform in a regulated environment: remediated penetration-test and BitSight findings, migrated the database server from a public to a private DMZ, upgraded ADFS certificates, and renewed/configured SSL/TLS certificates.
- Built a rule-based email scheduler that automates contract-update notifications to salespeople, reducing manual follow-up and improving sales-team response time.
- Improved reliability and UX: added a loading state that locks the screen until data finishes fetching (preventing actions on partial data), resolved a spam/performance issue by cleaning up New Quoter service files, and delivered the company-wide ALD → Ayvens rebrand across UI, logos, and branding.

LANGUAGES & TECHNOLOGIES

Languages	C#, TypeScript, JavaScript, SQL, C++, Java
Backend	.NET Framework, ASP.NET
Frontend	Angular, HTML, CSS, jQuery
Data	SQL Server, MySQL
DevOps	Azure DevOps, CI/CD pipelines

EDUCATION

B.Tech in Electronics and Communication
BIT Mesra

Jharkhand
Ranchi

ACHIEVEMENTS

- Spot Award, Société Générale (August 2024) - Recognized for outstanding performance and significant contributions to the team.
