

PATIENT'S NAME	MS. YASHWI PARASHAR	DATE	11.09.2026
AGE / SEX	27 YRS / F	PT ID	26348
INVESTIGATION	MRI RIGHT KNEE		

SEQUENCES OBTAINED USING 3 TESLA SUPER CONDUCTING MRI UNIT.

Technique: Multiplanar Multisequence MR imaging.

Clinical Indications: - H/o fall & injury now pain on the medial side

Prior Imaging: - N.A.

Medication/Sedation: - None administered.

FINDINGS:

Anterior Tibial Translation:

No evidence of anterior tibial translation or uncovering of the inferior surface of the posterior horn of the medial or lateral meniscus.

Menisci:

Medial meniscus: Increased intrasubstance signal intensity involving the posterior horn, suggestive of a grade I intrasubstance signal changes /degenerative change. Anterior horn is normal.

Lateral meniscus: Normal. No evidence of tear.

Articular Cartilage:

Tibial cartilage: Normal.

Femoral cartilage: Normal.

Patellar cartilage: Normal.

Cruciate Ligaments:

ACL: Partial high-grade tear involving the mid-substance.

PCL: Normal. No tear.

Collateral Ligaments:

MCL: Normal. No tear.

LCL: Normal. No tear.

PATIENT'S NAME	MS. YASHWI PARASHAR	DATE	11.09.2026
AGE / SEX	27 YRS / F	PT ID	26348

Posteromedial corner:

Posterior oblique ligament: normal.
Oblique popliteal ligament: normal.
Semimembranous tendon: normal.

Posterolateral corner:

Popliteus tendon: normal.
Popliteofibular Ligament: normal.
Arcuate Complex: normal.
Biceps Femoris Tendon: normal.

Medial & Lateral Retinacula: Normal.

Joint: Minimal joint effusion.

Patella: Prepatellar soft tissue contusional changes noted.

Patellar Tendon: Normal.

Quadriceps Tendon: Normal.

Soft Tissues: Normal.

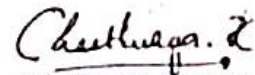

IMPRESSION:

- INCREASED INTRASUBSTANCE SIGNAL INTENSITY OF POSTERIOR HORN OF MEDIAL MENISCUS.
- PARTIAL HIGH-GRADE TEAR OF ANTERIOR CRUCIATE LIGAMENT INVOLVING MID SUBSTANCE.
- PREPATELLAR SOFT TISSUE CONTUSIONAL CHANGES.
- MINIMAL JOINT EFFUSION.
